

Company order system

(I could not find how to change relationships in QuickDBD)

Small database that stores information about employees, customers and projects.

The database will support the following activities:

Customer:

Customer\_id int

Name varchar

Project\_id int

Contact\_person\_id int

Contact\_person\_name varchar

Role varchar

Phone\_number varchar

Address varchar

City varchar

Postcode varchar

Project\_feedback text

Employee:

Employee\_id int PK

First\_name varchar

Last\_name varchar

Wage float

Hire\_date date

Project:

Project\_id int PK

Name varchar

Value float

Start\_date date

End\_date date

Job\_order:

Job\_order\_id int PK

Employee\_id int FK

Project\_id int FK

Description varchar

Order\_date timestamp

Quantity int

Price float

Employee\_project:

Employee\_project\_id PK

Project\_id int FK

Employee\_id int FK

Hours float
